SQL (Basic) ⬈ *(SQL)*

SKILLS

Programming languages: *(Go, Python, Java, SQL, and JavaScript)*

Markup Languages, Libraries and Frameworks: *(HTML5, CSS3, SASS/SCSS, MySQL, Oracle, PostgreSQL, Docker, and Dart.)*

Languages: *(English (Intermediate), Russian, Kazakh, Uzbek, Turkish (Pre-intermediate).)*

PROJECTS

SimpleBank ⬈   2022 – present

Using this API you can create and manage bank accounts containing the owner's name, balance, and currency. Record all balance changes for each of the accounts. Thus, every time money is added to or debited from the account, an account record will be created. Make a money transfer between 2 accounts. This must happen within a transaction for either the balance of both accounts to be successfully updated, or neither. Implemented by using Golang, PostgreSQL, and Docker.

SimpleOrderPizza ⬈   2022 – present

Using this API you can create an order pizza account. Order pizza and get confirmation from the manager. The manager saves order details and sends them to the kitchen and generates the bill. The customer gets pizza and pays the bill. Manager updates customer record and ticks pizza as sold. Implemented by using Golang, PostgreSQL, and Docker.
